

Go Beyond The Bin with Casella's Resource Rover

LEARN WHAT YOU CAN DO TO PROTECT THE ENVIRONMENT

The Casella Resource Rover is an interactive educational tool that informs and educates audiences on what we can do together to **Recycle Better™**. Made from a repurposed shipping container, the Resource Rover is an educational arcade on wheels, containing two games and four interactive displays, complete with a life-size garbage truck cab!

What's Inside:

Interactive Life Cycle Display

Follow different products through their life cycle by touching each item to hear a description of its process.

Recycling Claw Machine Game

Just like items move through conveyer belts at a MRF, pick up balls and drop them on the belts to score points and unlock the bonus.

Waste Sorting Game

Sort common waste items into the correct trash, recycling, or compost bins to score points.

Interactive Landfill Cross-Section

Click on the various landfill locations and the model will light up and share relevant information about each section. Learn about liners, gas collection systems, and more.

Compost Cross-Section

Use the buttons to bring up different videos that explain the composting process and bring back helpful tips and tricks for your at-home composting.

Garbage Truck Cab

Grab a photo and pretend like you are a garbage man for the day! Lots of fun buttons and noises to make it more realistic.

USE OF THE ROVER: We are happy to bring the Resource Rover to your various school education days, touch a truck, or other events by rental appointment.

HOW TO RENT: If you would like to rent the Resource Rover for an event please visit <https://bit.ly/ResourceRover>
